PELLE MECANIQUE REALISEE AVEC LE COFFRET No 10

Le coffret No. 10, le plus grand du système MECCANO, est présenté dans ce magnifique coffret façon chêne.

Cette parfaite reproduction est celle d'une pelle mécanique utilisée sur les chantiers où de grosses masses de terre ou de gravats doivent être chargées dans des bennes pour évacuation. Ce modèle est animé par un moteur électrique Meccano E 15 R qui entraîne les roues par l'intermédiaire d'un différentiel. Les mouvements de levage et de déchargement de la pelle sont commandés depuis la cabine et le treuil de levage possède un frein automatique.

Vue d'ensemble de la pelle mécanique avec son godet en position de chargement.
